NOTICE OF ALLOWANCE

Allowable Subject Matter

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance: The present invention pertains to an improvement for adjusting the effective length of a chain in a tubular-element rotating assembly, e.g., a power tong or pipe spinner. The effective length of the chain is adjusted by repositioning the primary drive assembly, or motor, relative to the main body of the tong or spinner. Currently in the art, different means have been used as the repositioning mechanism. For example, the SPINMASTER from HAWK Industries utilizes a plurality of location holes and pins to position the drive unit in the desired position. Both Soutsos (4,604,922 and 4,324,157) and Mason (2,862,690) utilize a hydraulic cylinder assembly to reposition the drive unit. Benedick (2,460,671) utilizes a rack and pinion assembly to reposition the drive unit. Hauk (4,099,429 and 3,906,820) utilizes a bolt and slot arrangement to reposition the drive unit. However, the present invention utilizes a rack-on-rack assembly and a cam-operated assembly to reposition the drive unit in order to adjust the effective length of the chain. It is, therefore, the examiner's opinion that the art of record considered as a whole, alone or in combination, neither anticipates nor renders obvious the rack-on-rack assembly or the cam-operated assembly, together in combination with the rest of the limitations in the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
